

Direct Interface

Guest check-in information is transferred automatically from the PMS to the FDU(s). This ensures that the information encoded on the keycard matches the information in the PMS. All your Guest Service Attendants have to do is swipe a blank keycard and hand it to the guest.

Indirect Interface

Perfect for larger, more complex hotel operations, the Gateway II supports all the Direct Interface features and is flexible enough to support numerous FDUs and small enough to fit under a hotel Front Desk. Cabling costs are minimized.

A user-interface ensures easy and rapid configuration and set-up.

To request more information and find out which interface is best for your hotel, please call us at 1-877-468-3555 (option 3)

Property Management System Interface

Speed up Guest Check-In; Guest to rooms faster

Eliminate Human Error; Save time at Front Desk

Increase Guest Satisfaction; Increase Loyalty

If your hotel has a Property Management System (PMS), ILCO can work with your PMS vendor to provide you with an interface that allows you to link your computer to your Front Desk Unit (FDU). This can save you precious time and increase guest satisfaction.

Creating keycards in one step

Through the PMS interface, all guest check-in information entered into the computer, such as room number and length of stay, is automatically transferred to the FDU. **The information is only entered once.** You simply have to swipe the keycards to encode them. **Your guests get to their rooms faster.**
